

The new Case SR and SV series skid steer loaders from CSE Equipment encompasses nine new skid steers, with advanced features for improved performance, enhanced productivity and increased operator comfort.

“Robust Case SR and SV series skid steer loaders have been designed for exceptional driving force and reliable handling in all conditions,” says Alex Ackron, national manager of CSE Equipment division. “Turbocharged, four cylinders, Tier 3 certified diesel engines, which provide the power and torque required to efficiently cope in the toughest site environments, also ensure operating efficiency and fuel economy.

“SR radial lift units are engineered for digging, prying and pushing, while the vertical lift SV models are designed for efficiently handling demanding lift and carry tasks.”

Models in the SR and SV series range from the SR130 unit, with a 590 kg operating capacity, to the SV300 machine, with a 1 360 kg operating capacity. Peak torque ranges from 130,5 Nm at 1 750 rpm, to 340 Nm at 1 400 rpm. The tipping load capacity extends from 1 179 kg to 2 720 kg and the breakout force of the bucket cylinder ranges between 18,5 kN and 38,2 kN.

This series offers 25% more interior width, with improved visibility, comfort and control. The cab has been sealed to reduce noise levels and dust ingress. There is an ultra narrow wire side screen design, with more glass surface area to provide 360° visibility for the operator. Side lighting enables 24 hour operation.

Users can choose from standard mechanical drives, or optional electro-hydraulic (EH) switchable controls. The EH option facilitates the match of control patterns to operator preference.

There is a new 'Power Stance' chassis with up to 21% longer wheelbase and 30/70 front/rear weight distribution designed to safely increase the capacity to lift and haul more material. These machines also offer increased travelling speeds and improved stability, regardless of working conditions.

Another advantage is this series has a large fuel tank ranging from a 60,5 to 96,5 litre capacity, which means the machine can operate all day without the need to stop operations for re-fuelling.

The new design of this series enables easy, ground line access for daily maintenance checks and a standard quick coupler enables the operator to switch attachments without having to leave the cab.

Optional attachments for these skid steer loaders include buckets, pallet forks, breakers, augers, sweepers, backhoes, stump grinders, cement mixers, cold planers, trenchers, rollers, slot cutters.

Case construction equipment, available exclusively from CSE Equipment in Southern Africa, includes loaders, backhoe loaders, excavators, telescopic handlers, mini-excavators and skid steers loaders.
